METHOD FOR PROPAGATING TEAMWARE TRANSACTIONS

Abstract

A method for propagating changes from a local workspace that is accessible by a client to a remote workspace that is accessible by a server includes generating a request from the client to the server to create a temporary workspace, obtaining selected data from the local workspace and requesting the server to store the selected data in the temporary workspace, and updating the remote workspace with the data in the temporary workspace. To propagate changes from the remote workspace to the local workspace, the method includes creating a temporary workspace that is accessible by the client, requesting the server to send selected data from the remote workspace, storing the selected data in the temporary workspace, and updating the local workspace with the selected data in the temporary workspace.
